Search

May 4th 2009

Introduction to PostgreSQL and talk on Full-text search capabilities in PostgreSQL

Oleg Bartunov (/ <http://www.sai.msu.su/~magera/>)

M.Sc. Hall, Dept. of Electronics and Computer Engineering, IOE

Kerosene was used to power my notebook,
Institute of Engineering, Tribhvan University

I gave a talk about full text search in
postgresql after trek. We made special support
of nepalese locale to make it works right.
There was no light in the university, so we
used generator to power notebok and projector.
It was really funny to speak for people
sitting in the darkness.

FTS 8.4

Devanagari script support (better Unicode support)

```
postgres=# set client_encoding to UTF8;
postgres=# select * from ts_parse('default','मदन पुरस्कार पुस्तकालय');
 tokid | token
-----+-----
      2 | मदन
     12 |
      2 | पुरस्कार
     12 |
      2 | पुस्तकालय
(5 rows)
```

Thanks to Dibyendra Hyoju and Bal Krishna Bal for testing and valuable discussion

When I started using Postgres

- No UTF-8, even no 8-bit
- No WAL
- No MVCC
- No replication
- No usable non-scalar data types
- No subselects, no window functions, no CTE
- It was Postgres95

Oleg Bartunov, major PostgreSQL contributor since Postgres95

How to choose a right database ?

- People usually choose a database looking on
 - Functionality, Performance
 - Availability - License, price
 - Local expertise, Personal experience
 - Compatibility to existing environment
 - Support
 - Other
- People start to think about one important feature of database after the project needs
 - Need new functionality, Better performance
- Project is in production, no way to change database
 - Starting to use various ugly «solutions»
 - System works, but looks pretty strange

Your system with wrong database

What is PostgreSQL

PostgreSQL — The world's most advanced open source object-relational database.

Extensible — data types, operators, functions, access methods (indexes).

[ANSI SQL](#) (1992, 1999, 2003, 2008, 2011),
NoSQL (key-value, JSON, JSONB)

Developed and supported by independent international community (users, developers, companies)

Pronunciation: post-gress-Q-L, post-gres, pgsql

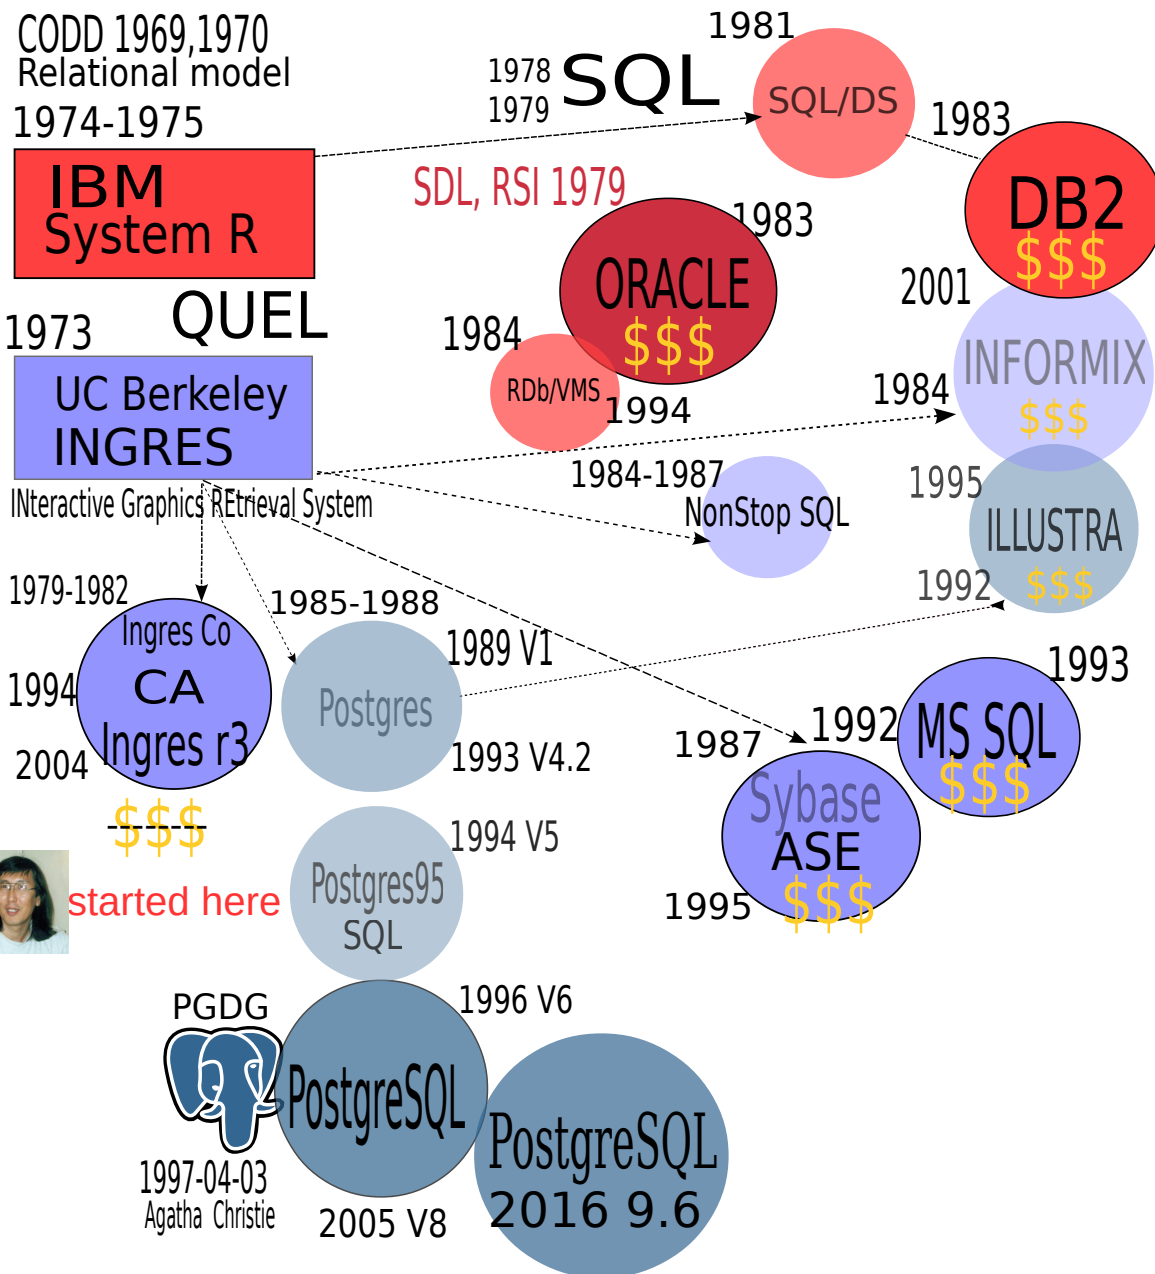

Web: <http://www.postgresql.org>, ([BSD](#), [MIT](#)) - like

PostgreSQL History >20 years

Michael Stonebreaker
Turing Award, 2015

started here

2017 10

- Any project could start with PostgreSQL
- PostgreSQL is a reliable and stable database with rich functionality and long history
- PostgreSQL has liberal BSD license, cross platform (~30)
- Developed by international community, no vendor lock

- PostgreSQL is **EXTENSIBLE**, this is the very important feature, which people miss ! It allow database to support
 - New workloads
 - New functionality
 - New environment
 - Often without restarting a server, no need core programmer.

"The main design goals of the new system are to:
2) provide user extendibility for data types, operators
and access methods,"

*Stonebraker M., Rowe L. A. The design of Postgres.
- ACM, 1986. - T. 15. - No. 2. - C. 340-355.*

"It is imperative that a user be able
to construct new access methods to provide
efficient access to instances of nontraditional
base types"

Michael Stonebraker, Jeff Anton, Michael Hirohama.

Extendability in POSTGRES , IEEE Data Eng. Bull. 10 (2) pp.16-23, 1987

Extendibility of PostgreSQL

0. Ability to change executor and planner
1. Data types, operators, access methods, indexes without core developers, deploy online !
2. FDW, procedural languages

Need more:

1. API to pluggable storages
 2. API to TM — XTM, eXtensible transaction manager
 3. Type-specific compression
-more....

Case 1: Web

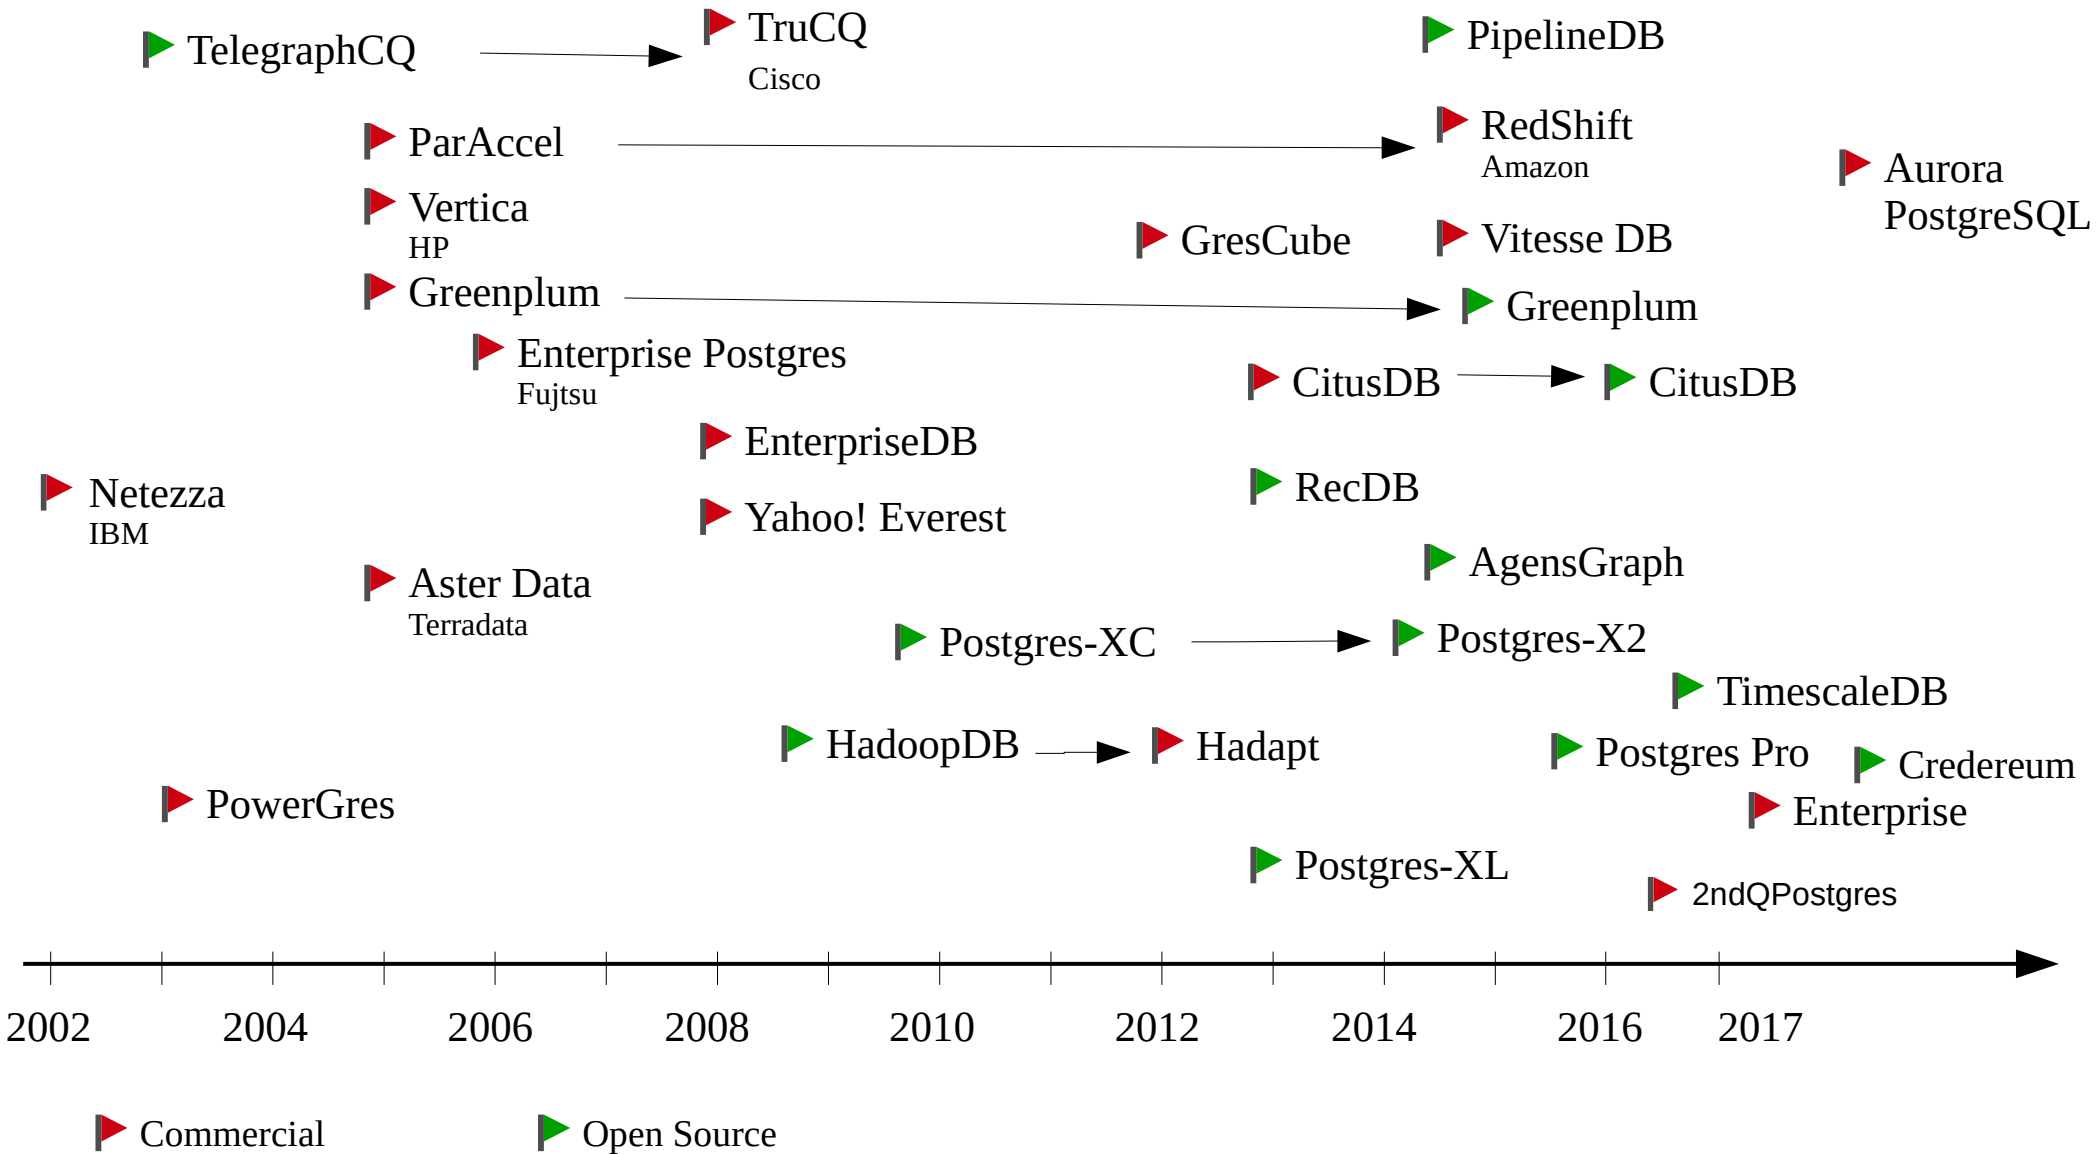

- 1996: Start using Postgres on Web, no 8-bit support — introduced locale
 - 1999: World's top-5 portal. We start with PostgreSQL 6.5.?
 - Requirement: on the hardware ~ my smartphone to support > 1 mln. users/day
 - Quickly run out of resources
 - Denormalize, use arrays -> slow -> discover GiST → improve GiST - intarray with indexes
 - Need FTS, made tsearch using intarray and GiST indexes
 - Need fast search on hierarchical data — ltree — GiST indexes
 - Need flexible schema — hstore — GiST index
 - Need faster FTS — GIN index for tsearch, hstore
 - Need misprint search — pg_trgm — GiST/GIN indexes
 - Compete to NoSQL - better/binary json - jsonb — GIN index
 - Need faster FTS — RUM access methods
- 2017: STILL USING PostgreSQL !**

Extensibility makes
PostgreSQL Universal Database !

PostgreSQL: OLTP, MPP, OLAP, CLOUD, GIS, STREAM, TIMESERIES, GPU, BLOCKCHAIN

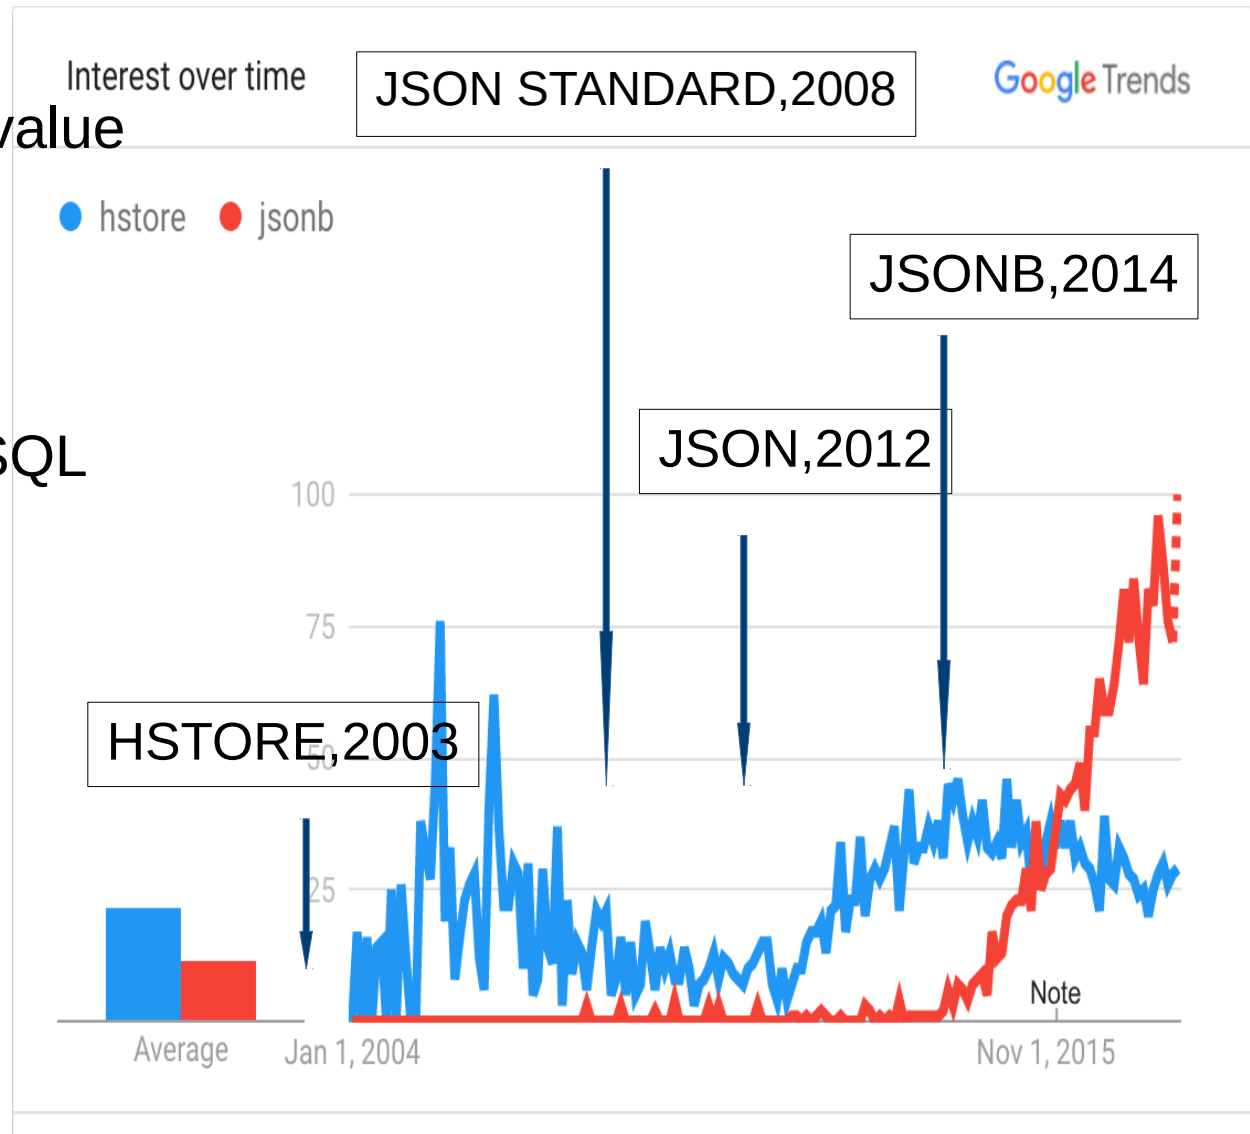

PostgreSQL Forks (we love forks!)

- PostgreSQL - OLTP, Web, Science
extensions: GIS (PostGIS), time-series (TimeScaleDB),
Stream data (PipelineDB), interactive analytics (Citus),
vector ops, async mpp on GPU (PG-Strom)
- AgensGraph — Graph model, graph query language
- Postgres Pro Enterprise - Multimaster, block compression,
64-bit TX, partitioning, adaptive planning, scheduler,
incremental backup
- Redshift — Cloud, column storage, compression, OLAP
- Greenplum - MPP, OLAP (complex reports)
- Postgres-XL — MPP OLAP (ACID)
- Vitesse DB — OLAP (JIT, column storage, threads)
- Aurora PostgreSQL — OLTP, S3 storage
- EDB Postgres Advanced Server - Oracle compatibility

Case 2: NoSQL PostgreSQL is MATURE

- HSTORE — binary key-value storage, index support
- 2003 — initial release
- 2006 — part of PostgreSQL

Two JSON data types !!!

- Textual storage «as is»
- Binary storage, index support

- A lot of functionality !

SQL/Foundation recognizes JSON after 8 years

4.46	JSON data handling in SQL.	174
4.46.1	Introduction.	174
4.46.2	Implied JSON data model.	175
4.46.3	SQL/JSON data model.	176
4.46.4	SQL/JSON functions.	177
4.46.5	Overview of SQL/JSON path language.	178
5	Lexical elements.	181
5.1	<SQL terminal character>.	181
5.2	<token> and <separator>.	185

SQL/JSON in PostgreSQL

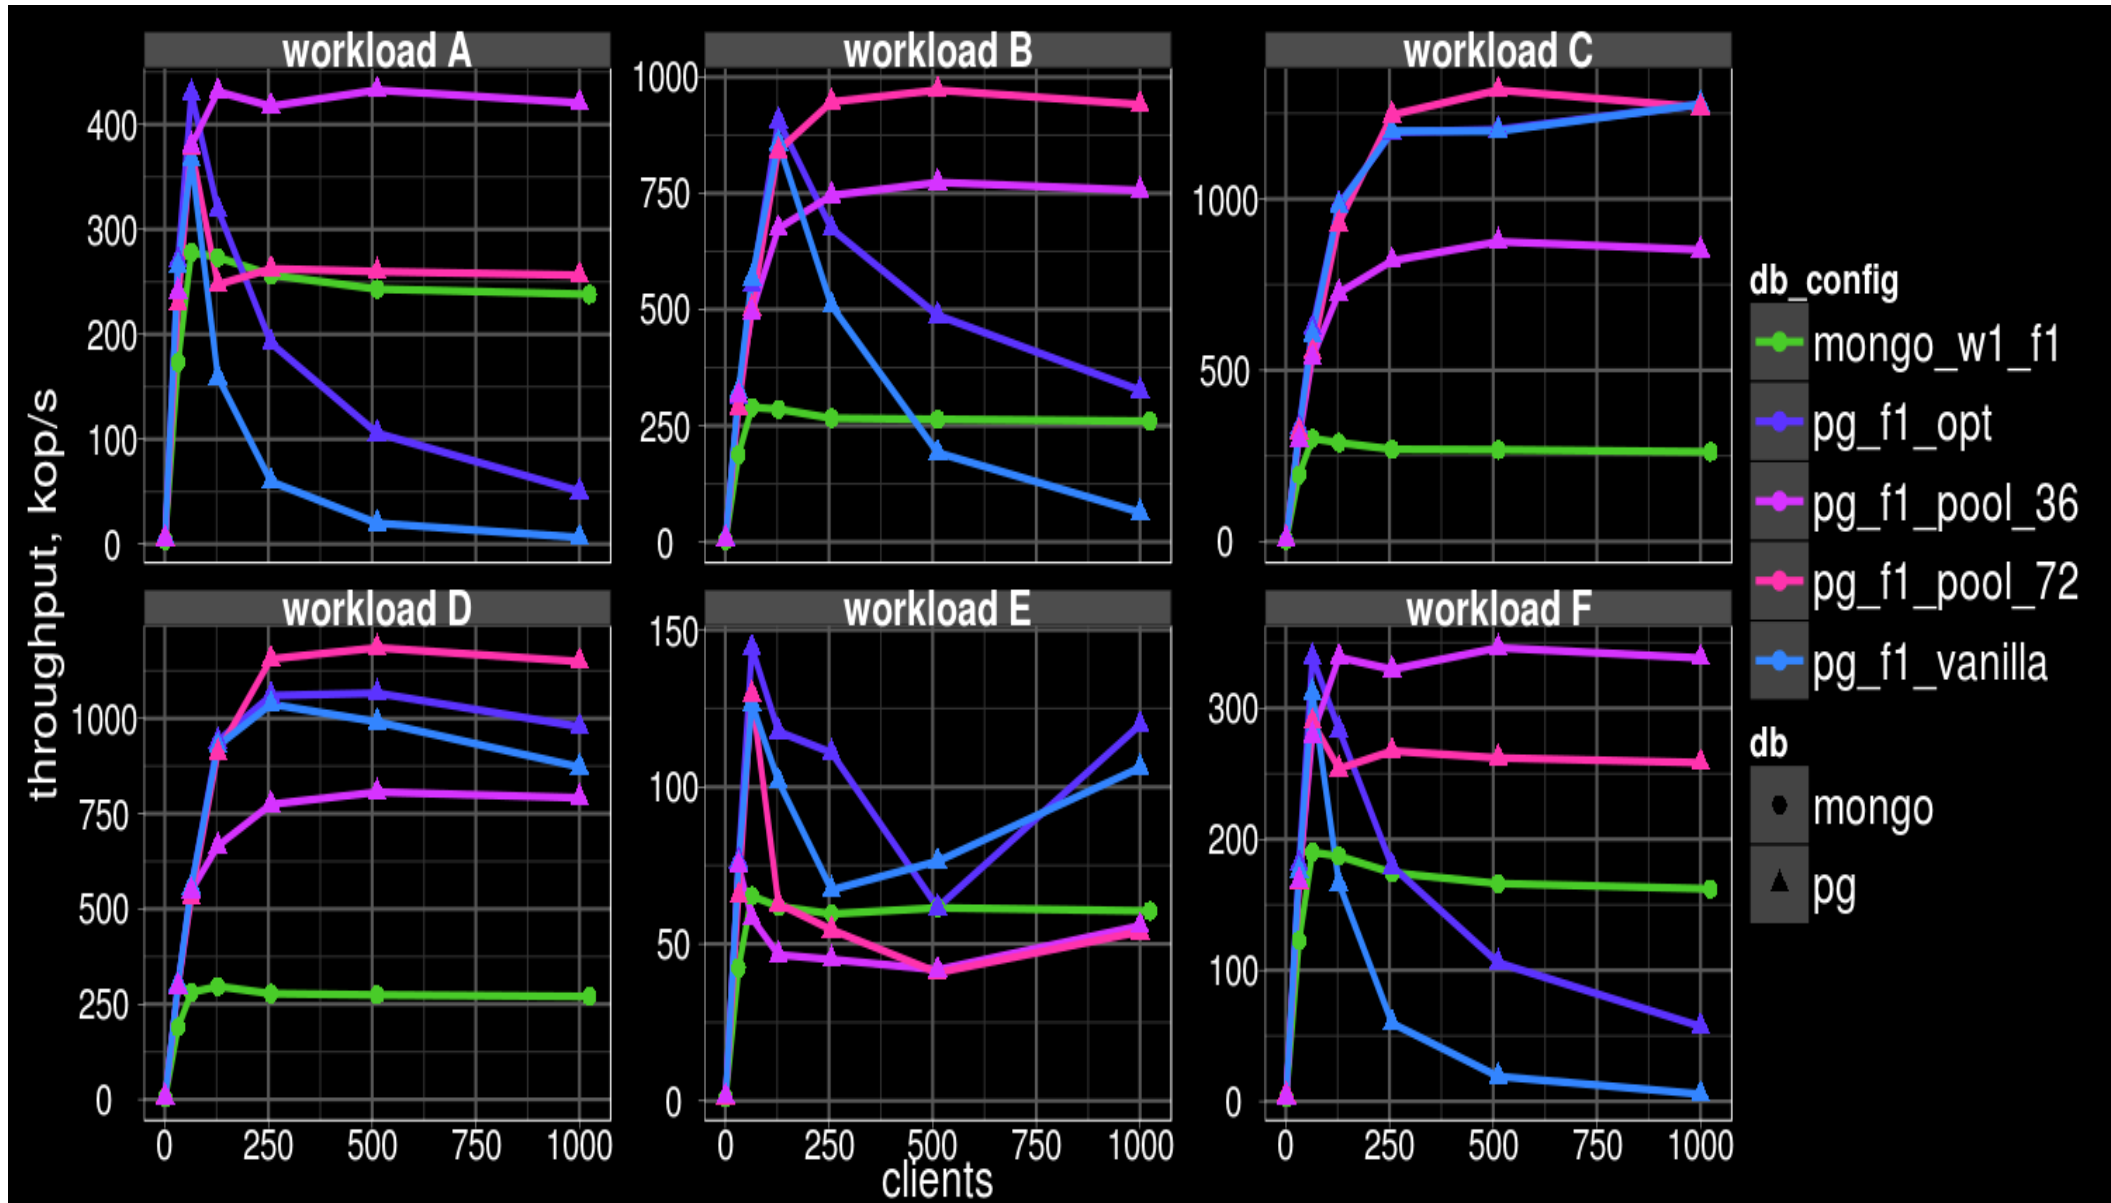

- PostgreSQL implementation (1 year of development)
 - Uses native data types JSON, JSONB
 - JSONPATH data type for SQL/JSON path language
 - Nine functions SQL/JSON functions for constructing:
 - JSON_OBJECT, JSON_ARRAY,
JSON_OBJECTAGG, JSON_ARRAYAGG
 - and retrieving
 - JSON_VALUE, JSON_QUERY, JSON_TABLE,
IS [NOT] JSON, JSON_EXISTS
 - Extensions: more methods, JSONB op JSONPATH

NoSQL Postgres is fast !

- Yahoo! Cloud Serving Benchmark (YSCSB) - de-facto benchmark for NoSQL databases
- We run YCSB for PostgreSQL 10, MongoDB 3.4.5
 - 1 server with 72 cores, 3 TB RAM, 2 TB SSD for clients
 - 1 server with 72 cores, 3 TB RAM, 2 TB SSD for database
 - 10Gbps switch
- In most practical cases PostgreSQL is faster MongoDB
- PostgreSQL performance degrades in high-contention writes (zipfian distribution of queries, high number backends >100)
- Avoid high-contention with built-in pool of connections (PG 12)

Built-in pool of connections helps !!!

History NoSQL Postgres

2019 ?

Custom types support
advanced indexing
update, delete

SQL/JSON++

2018

SQL/JSON

SQL 2016 support
Jsonb compression
subscripting syntax

- **Number of mentions of the system on websites**, measured as number of results in search engines queries. At the moment, we use [Google](#), [Bing](#) and [Yandex](#) for this measurement. In order to count only relevant results, we are searching for <system name> together with the term database, e.g. "Oracle" and "database".
- **General interest in the system**. For this measurement, we use the frequency of searches in [Google Trends](#).
- **Frequency of technical discussions about the system**. We use the number of related questions and the number of interested users on the well-known IT-related Q&A sites [Stack Overflow](#) and [DBA Stack Exchange](#).
- **Number of job offers, in which the system is mentioned**. We use the number of offers on the leading job search engines [Indeed](#) and [Simply Hired](#).
- **Number of profiles in professional networks, in which the system is mentioned**. We use the internationally most popular professional networks [LinkedIn](#) and [Upwork](#).
- **Relevance in social networks**. We count the number of [Twitter](#) tweets, in which the system is mentioned.

Case 3: PostgreSQL and Supernovae

SN 1987a, Type II, +2.9, Tarantula Nebulae in LMC,
168 000 ly, progenitor: Sanduleak -69° 202,

The Scale of the Universe

- Supernovae(Ia) - «standard candles»
- Used to measure the distance to the host galaxy

What is the fate of the Universe ?

WRITTEN IN THE STARS

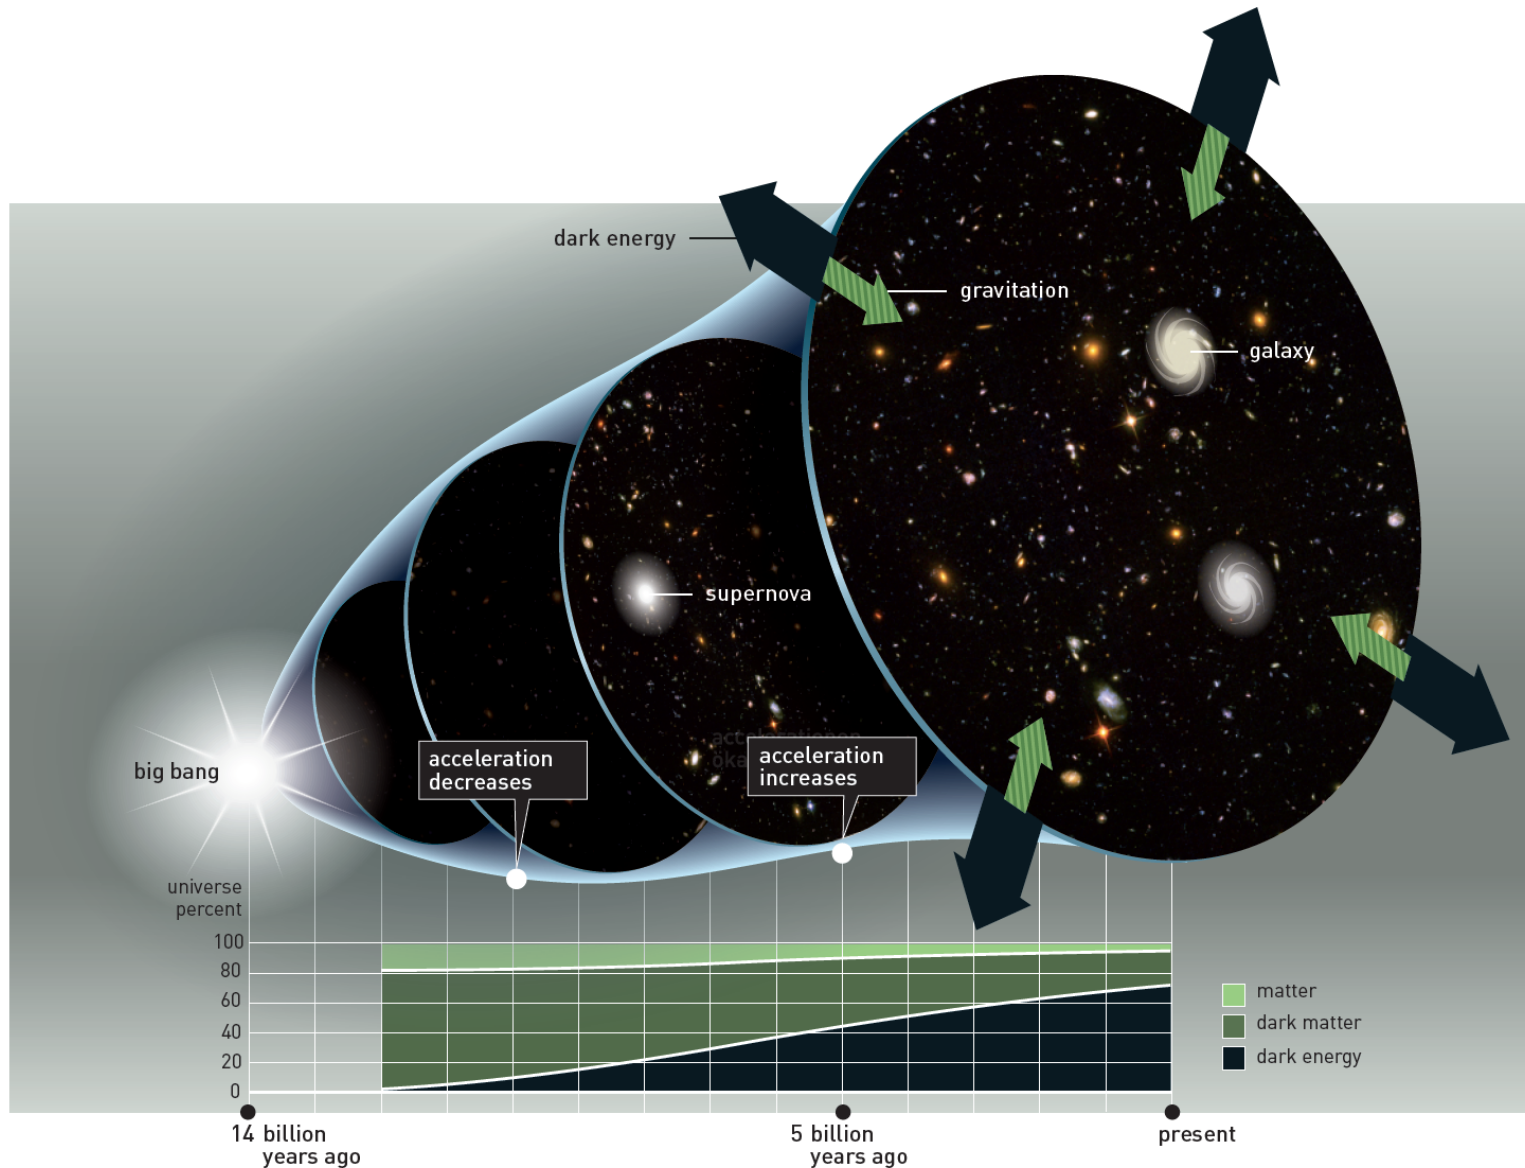

Figure 1. The world is growing. The expansion of the Universe began with the Big Bang 14 billion years ago, but slowed down during the first several billion years. Eventually it started to accelerate. The acceleration is believed to be driven by dark energy, which in the beginning constituted only a small part of the Universe. But as matter got diluted by the expansion, the dark energy became more dominant.

Indexing the SKY with PostgreSQL

HEALPIX

HTM

Q3C (PG)

The sphere segmentation in Q3C

PGSphere (PG)

Database of astronomic catalogues in
Cambridge University

~5 dbs, ~ 40 users, up to ~ 10^7 queries per
day, size 40Tb

pg 9.4 + q3c + hstore

Example of research: Kuposov, S. E., Belokurov, V.,
Torrealba, G., & Evans, N. W. (2015). Beasts of the Southern
Wild: Discovery of nine Ultra Faint satellites in the vicinity of
the Magellanic Clouds. *The Astrophysical Journal*, 805(2),
130.

Real time Detection of alerts in the Gaia

~10 dbs, 10 users, up to ~ 10^6 queries per day, size 30Tb

pg 9.3 + synchronous replication + q3c

Example of research: Campbell, H. C., Marsh, T. R., Fraser, M., Hodgkin, S. T., de Miguel, E., Gänsicke, B. T., ... & Kozlov, S. E. (2015). Total eclipse of the heart: the AM CVn Gaia14aae/ASSASN-14cn. Monthly Notices of the Royal Astronomical Society, 452(1), 1060-1067.

Robotic network telescopes by SAI MSU

8 observatories (5 in Russia, 3 outside)

total size ~100TB

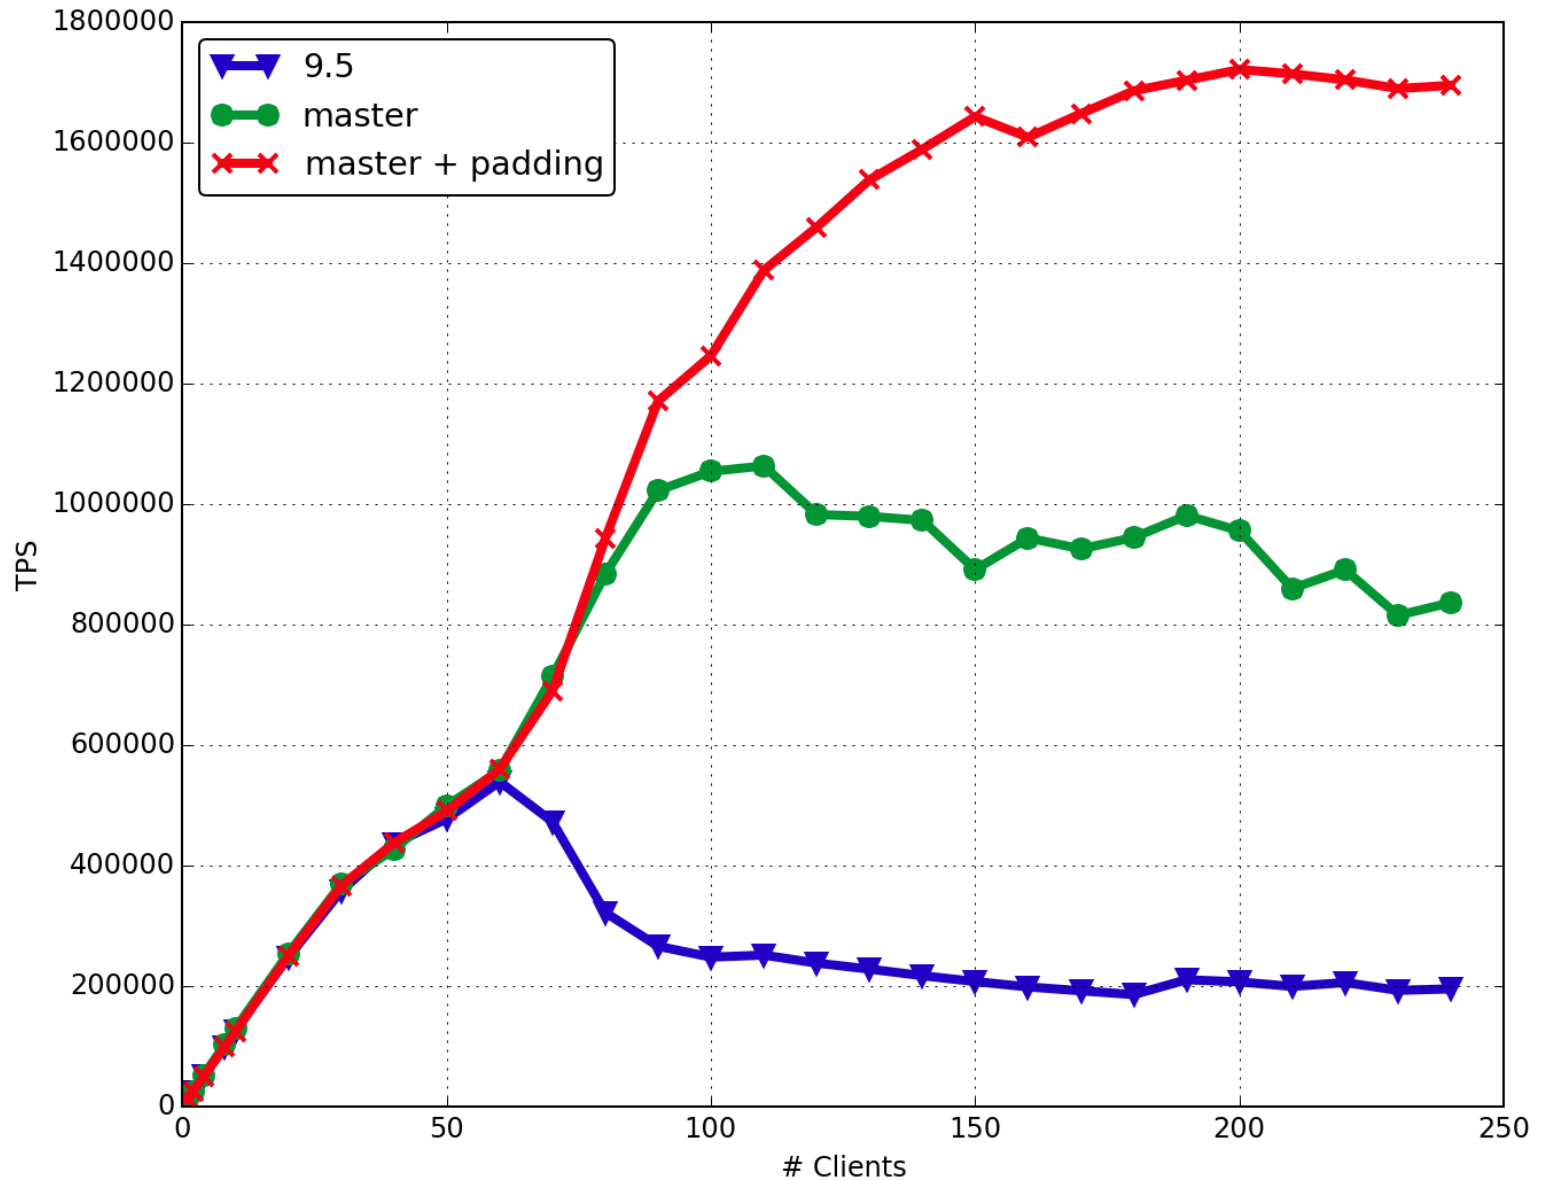

pg 9.0-9.4 + pgsphere + replication

See:

- Lipunov, Vladimir, et al. "Master robotic net." *Advances in Astronomy* 2010 (2010).
- Kornilov, Victor G., et al. "Robotic optical telescopes global network MASTER II. Equipment, structure, algorithms." *Experimental Astronomy* 33.1 (2012): 173-196.

PostgreSQL scalability on 4x18 x86

pgbench -s 1000 -j \$n -c \$n -M prepared -S on 4 x 18 cores Intel Xeon E7-8890 processors
median of 3 5-minute runs with shared_buffers = 32GB, max_connections = 300

Excellent scalability on 4-socket X86 machines

Support a wide range of workloads

- High security data, relational, NoSQL, OLAP

Postgres-centric companies

- 2ndQuadrant, EDB, Postgres Professional ([roadmaps](#))

Postgres groups

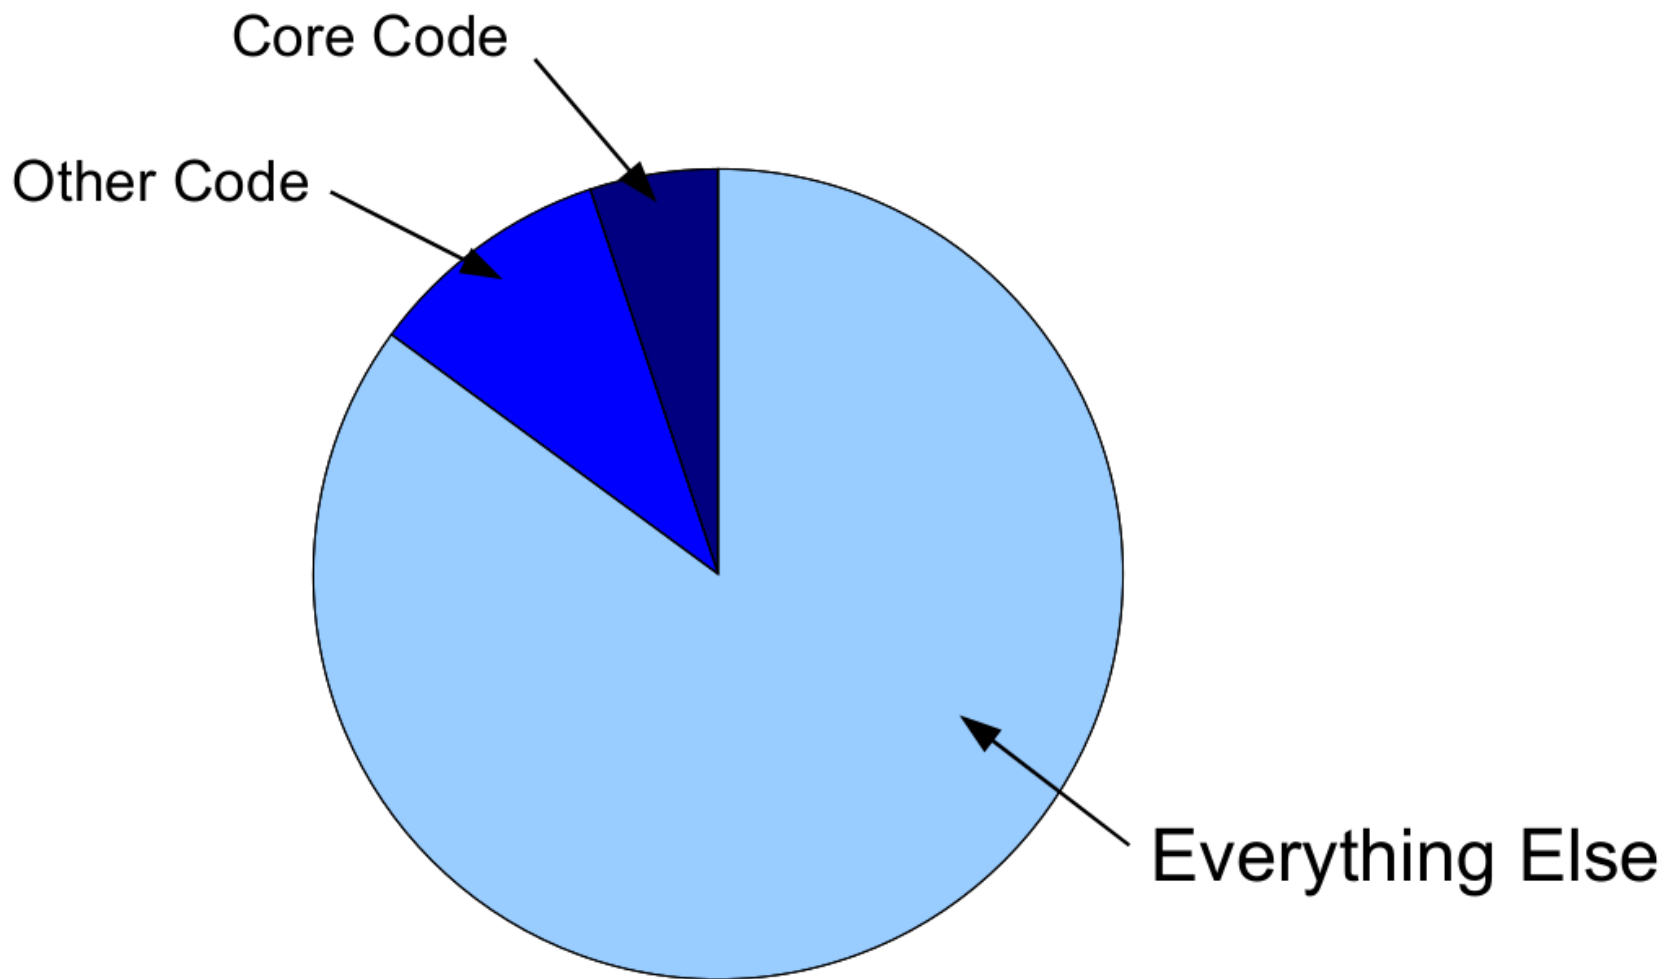

- NTT, Fujitsu, Amazon, Alibaba, Tencent,...

Postgres Development from

- Community driven → Business driven

Postgres is used in mission-critical enterprise systems

There are many ways to help Postgres

Core development

Development, review, testing, reporting bugs

Ecosystem

Extensions, drivers, ORM, monitoring tools... Postgres support in applications
Distributions, packages

Documentation

Improvement, translations, writing books, papers, ...blogging!

Meetings, Education

Creating of local communities, Conference, meetups, seminars, hackatons, educational and training courses

Use PostgreSQL!

Use Postgres in your company !

Sponsorship

Help development, sponsor community events.

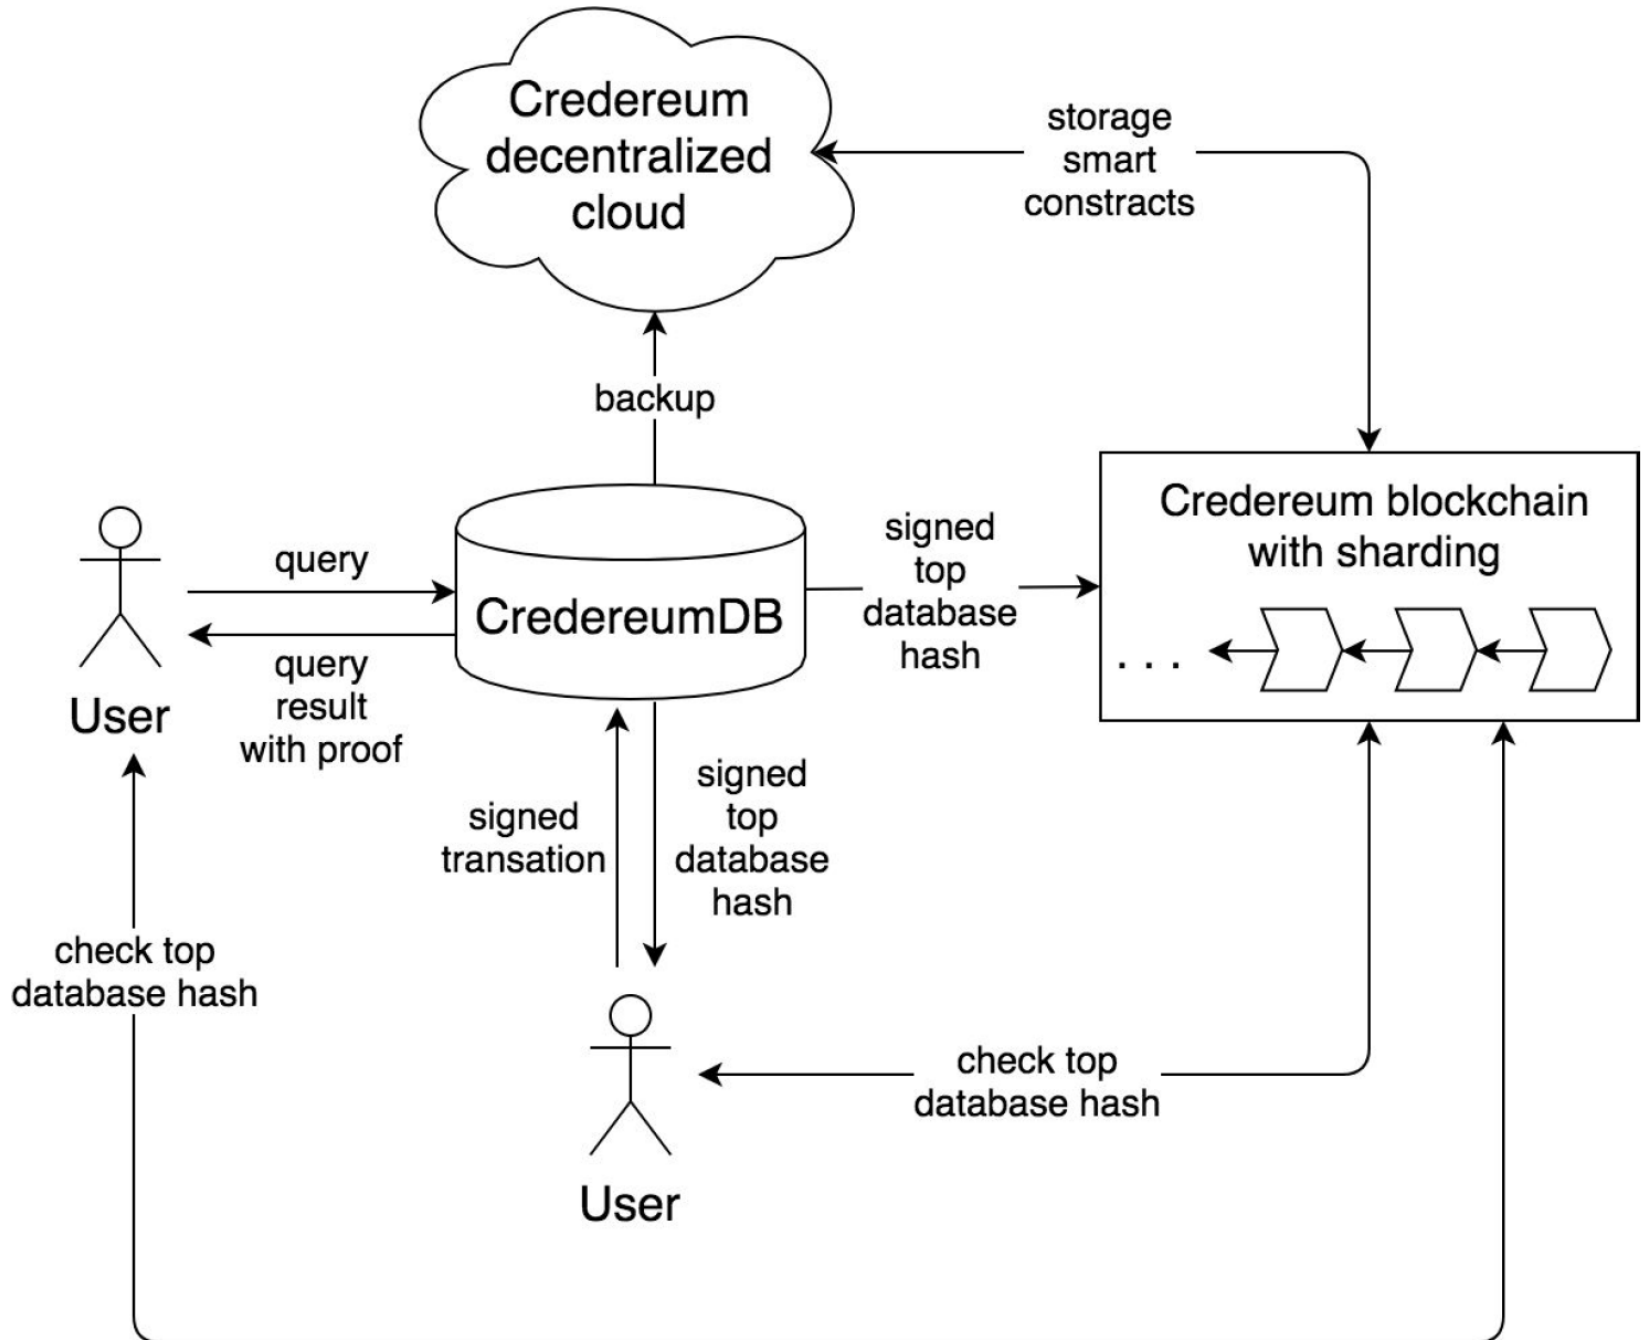

Books about PostgreSQL BSD License, translate them !

How to know your database is not compromised ?

Credereum uses digital signature to sign transactions and Blockchain to store signatures to solve this problem.

Credereum platform

Several Postgres groups are working on

Postgres Distributed

Postgres Parallel

Postgres Asynchronous

Postgres Extendable+

Postgres NoSQL

Postgres Scalable

Postgres Trusted
